

Netapp Industrial visit Report

Thursday, 26 oct 2023

We had a visit to netapp corporate company located at [40/C, Itpl Main Road Survey, No. 30P, 31P 32, Keb Colony, Hoodi, Bengaluru, Karnataka 560048](#). The company has the huge campus of 500,000 square feet which has all the facilities like outdoor sports, indoor sports, gym, food etc, the campus is surrounded with greenery and good environment.

Our team of 40 people with two faculties reached the netapp campus at 9.00 am. The company had a good security, we entered the campus there was arranged breakfast for us we had breakfast. We had the seminar which was divided into 4 sessions. We had some fun activities along like quiz and games and also rewards for winners.

Session 1

This was the introductory session in which they explained about the campus and the company.

Netapp India Pvt Ltd is a multinational computer storage and data management company. It specializes in providing data storage and management solutions, including hardware, software, and services, for businesses and organizations. NetApp's primary focus is on network-attached storage (NAS) and storage area network (SAN) solutions, which are used to store, manage, and protect data in data centers and cloud environments.

Some key offerings and products from NetApp include:

1. **FAS (Fabric-Attached Storage) Systems:** These are NetApp's line of storage arrays that can be used for both file and block storage. They are known for their reliability and scalability.
2. **ONTAP:** This is NetApp's proprietary storage operating system that powers their storage solutions. It provides features like data deduplication, snapshotting, and data replication.
3. **All Flash Arrays (AFF):** NetApp offers all-flash storage arrays designed for high-performance workloads, which are particularly useful for applications that require low latency and high IOPS (Input/Output Operations Per Second).
4. **Cloud Data Services:** NetApp provides cloud-based data management solutions that allow organizations to manage their data in hybrid and multi-cloud environments. This includes services like Cloud Volumes ONTAP and Azure NetApp Files.
5. **Data Management Software:** NetApp offers a range of data management software products for backup, disaster recovery, and data protection.

NetApp's solutions are used by a wide range of industries and enterprises to store, protect, and manage their data efficiently. The company has a significant presence in the enterprise storage and data management market and has been a key player in helping organizations adapt to the challenges of data growth and data management in the digital age.

Session 2

In this session we had campus tour in which we visited in and around the campus. We visited different offices and department of the company

After this we had a break and had lunch.

Session 3

This was the main session and important session in which we had visited to actual lab where we observed many things (related to storage and transfer of data) and learnt many things related to services this company provides, how do they manage the things, which problems, require what type of solutions, where do they seek help etc etc.

Session 4

This was the last and the concluding session in which we had meeting with the pesu alumni who were working there they shared their experience. lastly Distributed rewards for winners.
